BUSINESS ANALYSIS

Where will Vimeo's next dollar come from?

Client: Vimeo at the handover to Bending Spoons (November 2025), read from the outside through its SEC filings from 2021 to Q3 2025.

> **What drives revenue today, where could growth come from, and which bet is worth testing before anyone is hired for it?**

–21%
Self-Serve subscribers 2021-2024, while ARPU rose 9%

$23.2M → $83.2M
Enterprise revenue in three years; bookings –2% in Q3 2025

0.68%
upgrades a year per eligible account to break even

$2.2M
net present value at the 1% plan

WHAT I DID

- Split revenue into volume and price by category, each figure traced to its filing.
- Sized three growth bets and built the business case for routing Self-Serve accounts to Enterprise.
- Designed the A/B test that would decide it, with sample sizes and a decision rule measured on simulated tests.

WHAT IT FOUND

- An Enterprise account pays about 120 times a Self-Serve one, and the filings say Enterprise is often an upgrade from Self-Serve: the lever sits between the two.
- A 180-day one-sided test on 20,982 of the 22,558 eligible accounts can tell.

WITH REAL DATA

- Account-level upgrade history instead of the filings' aggregates.
- The sales team's real capacity and the first Enterprise deal size by segment.
- The test run, and the decision rule applied as written.

How it is checked. The Excel model checked against Python on 209 values; the interactive model's JavaScript on 1,200 values from 40 random scenarios, sample sizes included.
